

- What do we need?
  - Milestone 2:
    - Management tool
      - Screenshot
    - Plan cycle and methods
      - chart/graphic or other
    - Requirements
      -
    - Agile stuff (retro meetings etc.)
- Integration
  - Python or js?
    - js runs browser, py runs server (not necessarily groot)
    - Js on front end (necessary)
    - For integration... REST (in everything); all the formats (key, value pairs) need to be standardized.
      - Python for this part then
- Splitting up, 2 on database, 2 on integration, 2 on fe
  - fe work on user login/homepage
  - database work on basic structure and standardization
  - Integration work on communication and standardization
-
